Spaying or Neutering—Why It's the Healthier Choice

Veterinary studies have shown that there are definite health benefits to altering your pet. Female animals are far less likely to develop cancer if they have been spayed. Male animals also benefit from neutering by lowering the risk of prostate infections, abscesses and cancerous tumors.

One of the more important benefits of altering your pet is to prevent unwanted pregnancies. By limiting the animal population, we decrease the most common cause of death in the United States of healthy dogs and cats, euthanasia.

Voucher Assistance Program

One dollar from every animal license paid in San Mateo County is placed in the Animal Population Trust Fund to assist residents of San Mateo County with the cost of spay/neuter surgery for pets. Vouchers are also available to assist with spay/neuter costs for the feral cat population.

To Request A Voucher

Complete the form and mail it to:
