**Epistaxis**

**History**
- Age
- Past medical history (hemophilia, Von Willebrand)
- Medications (HTN, anticoagulants, aspirin, NSAIDs)
- Previous episodes of epistaxis
- Trauma
- Duration of bleeding
- Quantity of bleeding (mild or severe)

**Signs and Symptoms**
- Bleeding from nasal passage
- Pain
- Dizziness
- Nausea
- Vomiting

**Differential**
- Trauma
- Infection (viral URI or Sinusitis)
- Allergic rhinitis
- Lesions
- Epistaxis digitorum
- Aneurysm

**E**

| Cardiac monitor |

**P**

| Consider, IV |
| Consider, Ondansetron |
| If systolic BP < 90 |
| Normal Saline bolus 500ml IV/IO |
| Maximum 2L |

**Notify receiving facility. Consider Base Hospital for medical direction**

---

**Pearls**
- It is very difficult to quantify the amount of blood loss with epistaxis.
- Bleeding may also be occurring posteriorly. Evaluate for posterior blood loss by examining the posterior pharynx.
- Direct pressure is defined as constant, firm pressure for 20 minutes with head positioned forward without reexamining the affected nares(s).
- Anticoagulants include warfarin (Coumadin), apixaban (Elequis), heparin, enoxaparin (Lovenox), dabigatran (Pradaxa), and rivaroxaban (Xarelto).
- Anti-platelet agents like aspirin and many over-the-counter headache relief powders (i.e., Excedrin Migraine),
