Starting Buprenorphine/Naloxone (Suboxone) at Home

When Do I Start?

Before taking your first buprenorphine dose, you want to feel lousy from withdrawal symptoms. Wait as long as you can, because the worse you feel when you start the medication, the better it will work. Use your SOWS score to help you determine if you are ready to take it.

You should have at least **3 of the following withdrawal symptoms:**

![Early Symptoms of Opiate Withdrawal](image)

- Anxiety
- Muscle aches
- Watery eyes
- Yawning
- Runny nose
- Sweating
- Depression
- Insomnia

**HANG IN THERE. YOU WILL FEEL BETTER SOON!**

It should be at least **12 hours since you last used heroin or pain pills (oxycontin, percocet, etc.)**

AND at least **36 hours since you last used methadone or fentanyl.**

1. **Place strip under your tongue.** This medication will not work if you swallow it or take it any other way except under the tongue.

2. **Keep strip under your tongue for 15 minutes.** During this time, do not eat or drink anything.

3. **Wait 30 min-2 hours.** If you still feel bad, you can take another dose.

Remember: this medication only works if the film is kept under the tongue. **Do not swallow it!**
1. Open one package by tearing the foil at the notch.
2. Cut the film in half as shown below to get the desired strength.
3. Place the film under your tongue and let it dissolve for 15 minutes. Do not eat or drink during that time until the film has dissolved.
4. Reassess every 30 min-2 hours. If you are still having symptoms, take another dose of Suboxone.
5. **Do not take more than 16 mg Suboxone the first day.**
