CLINICAL PEARL

- Anosmia may be due to COVID-19 inflammation and not SARS-CoV-2 itself

According to a postmortem study published in *JAMA Neurology*, focal COVID-related inflammation, rather than the virus itself, may cause the early symptom of loss of smell which is often seen with COVID-19. Johns Hopkins researchers led the multicenter study, which involved examining the olfactory bulb at the base of the brain of 23 deceased COVID-19 patients and 14 matched controls who died of other causes from Apr 7, 2020, to Sep 11, 2021. The researchers used light and electron microscopy to look for any SARS-CoV-2 genetic material, assess cell structures and characteristics, as well as the blood vessels and neurons within them. They also measured the number of axons in the neurons, which inform sensory perception and movement. Information about sense of smell and taste was derived from the medical records of three patients and from family interviews for the remainder. Three of the 23 COVID-19 patients completely lost their sense of smell, 4 had an impaired ability to smell, and 2 lost both smell and taste. No controls lost either smell or taste. The deceased COVID-19 patients had more severe vascular injury and far fewer axons in the olfactory bulb—particularly those with diminished or total loss of smell, suggesting that these effects are linked to SARS-CoV-2 infection. Despite the nerve and vascular damage seen in the deceased COVID-19 patients, most had no detectable SARS-CoV-2 virus particles in the olfactory bulb. These findings suggest that SARS-CoV-2 infection of the olfactory epithelium leads to inflammation, which in turn, damages the neurons, reduces the numbers of axons available to send signals to the brain, and results in the olfactory bulb becoming dysfunctional.

In a related *JAMA Neurology* audio interview, Dr. Ho, one of the study researchers said that long-term loss of smell occurs in about 1% of people and may be preventable. “If inflammation is the major cause of the injury in olfactory structures, it is possible that we may be able to use anti-inflammatory agents as the treatment.”
